

## Outside Lighting

### Automated Lighting

The drive, front door and pool lights are on timers. Please ask if the times need changing.

### Upstairs Veranda and Patios

The switches are located behind the curtains in the dining area and lounge. Each bedroom has a switch near the patio doors, which controls the light outside. There are additional switches in the master bedroom for outside lighting.

### Pool Deck, Pergola, and Tree Lights

At the bottom of the side steps, there's a switch on the wall facing you. This controls the pool deck, pergola and tree lights.

### Courtyard

The courtyard light switch is on the panel inside the front door. Near the corner of the building, the double switch near the steps also controls the light above it. The other switch is for the lights at the side of the building. There's another switch for them at the bottom of the steps.
